

## Edge PaaS

(Platform as a Service)

The Edge of your organization keeps expanding with new sites & more employees joining. Take control and simplify Edge infrastructure management for new and or existing offices.

### What is Edge PaaS?

An all-in-one hardware, software, and management service on a monthly subscription. No capex.

We take the headache and hassle of opening a new office, at least from an IT perspective.

No need to plan & build a dedicated IT room with IT racks to house multiple servers, IT appliances and figure out how much space is needed for future growth. Reduce logistic issues around having to ship boxes around. And most importantly reduce the number of highly skilled IT, networking and IT security resources required.

### How does it work?

We build IT and deploy it in the cloud. Optionally we can provide an on-premise server.

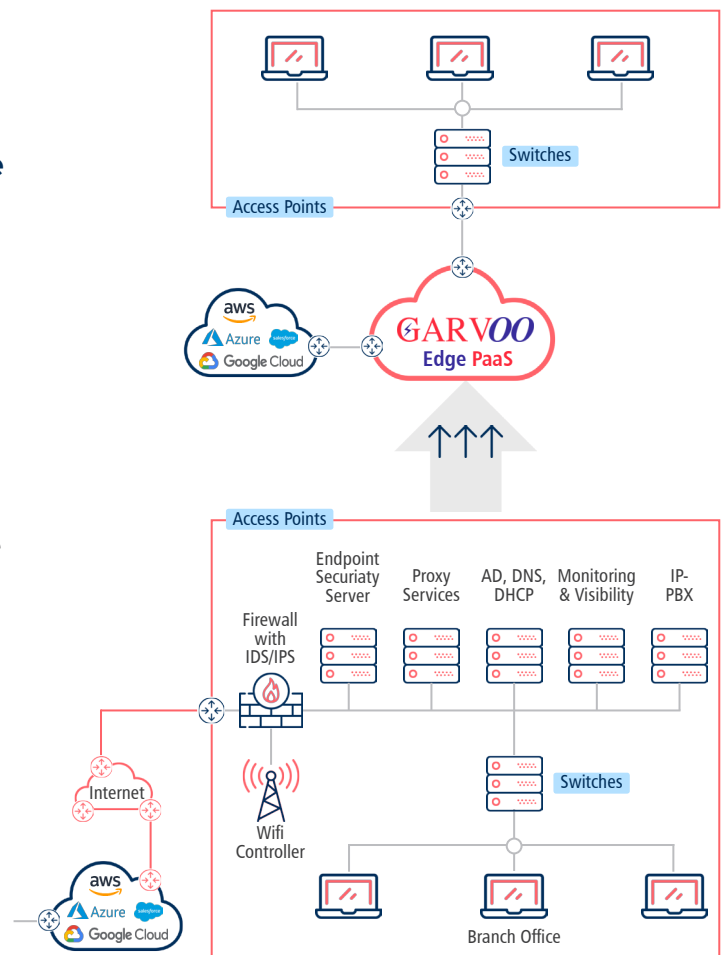

We build a **Core Services Pack** comprising of IT services needed by all offices, services like DNS, LDAP/ AD and deploy it on a virtual **VMware instance** in the cloud in one of our global data centers.

We then check with you for additional services, like specific security solutions you may need like DLP, Phishing protection etc. and add them as well.

Get the internet connection from the ISP provider of your choice. We will do the rest.

And that's it, we get you up and running with the convenience of plug and play.

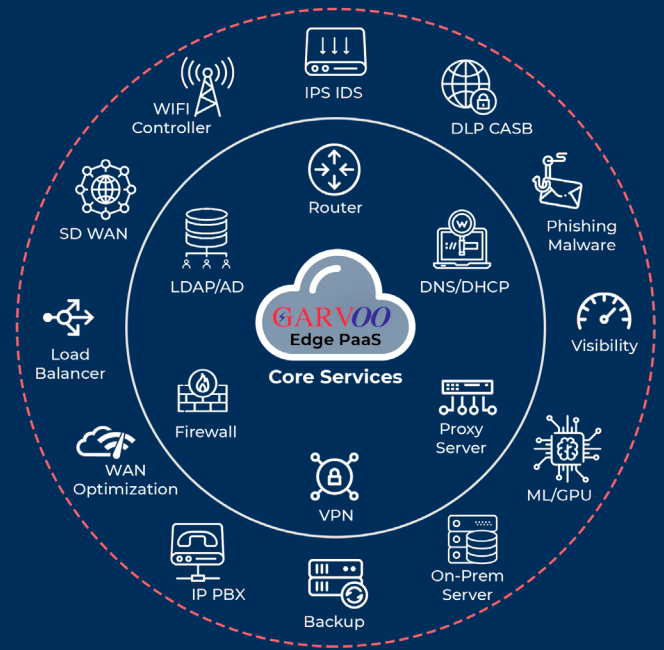

And as a managed service provider we monitor, manage and support the infrastructure on an ongoing basis.

## What is included?

All Core Services are included out of the box and plenty of options to cater to specific needs.

Take a look at the list of Core Services included at no extra cost. We offer plenty of customization options to meet your specific needs with advanced WAN & Security services.

## Features & Services

Edge PaaS is built using best of breed technology & proven expertise.

### Expertise

Our team has over two decades of experience managing the infrastructure for companies like Speedera Akamai, Aryaka, Skyhigh – McAfee to name a few.

### Hardware & Software

We partner with leading providers like VMware, Equinix, Citrix, Ghanghor Cloud to give you a robust proven solution.

### Managed Service

- > Monitoring 24 x 7
- > Proactive Systems management
- > Break fix support
- > Routine change requests

We implemented Edge PaaS to reduce costs & streamline our IT ops, **but we also ended up with a new conference room!** It seems eliminating all the servers etc. freed up the IT room. Priceless!

Milpitas, CA 95453

## Sign up & Implementation

Designed for Simplicity, in three easy steps from consideration to “Go Live”.

### Step 1: Answer Questionnaire

Let us know what services you need and the number of employees.

### Step 2: Review Configuration & Price

We get back with a technical configuration & price. Prices start at less than thousand Dollars a month, as per need & scale.

### Step 3: Sign off & Go Live

Sign off & give us a go live date. We can be ready in a few days to a week.

## Benefits

Edge PaaS helps you simplify, secure and save money.

- > Shorter implementation times
- > Simplify deployment
- > Zero capex & reduced TCO
- > Pay as you grow
- > Reduce technology refresh costs
- > One managed service team – for your Compute, Network & Security needs
- > Advanced enterprise grade functionality options like SD WAN, WAN Optimization, DLP, Phishing protection at affordable cost
